WEEKLY PROJECT REPORT – WEEK 3

Academix – Intelligent Academic Management System

Student Details

• Khushi Lohan (221121)

• Prince Grewal (221144)

• Gaurav Saini (221113)

1. Introduction

This report presents the progress achieved during Week 3 of the project "Academix – Intelligent Academic Management System." The focus this week was on enhancing system interactivity, improving club workflows, and upgrading user interface experience through theme customization.

2. Club Notification System

A structured notification mechanism was implemented for club activities. When a club coordinator creates or updates an event, notifications are automatically triggered and displayed on the student dashboard.

Key Features:

- • Automatic notification generation upon event creation.
- • Dashboard-based notification display for enrolled students.
- • Backend-triggered notification logic integrated with REST APIs.

3. Direct Club Enrollment via Student Dashboard

A direct club enrollment feature was added to the student dashboard. Students can now enroll in clubs independently without requiring coordinator intervention.

Key Enhancements:

- • Enrollment button integrated within student dashboard.
- • Automatic update of club-member relationship in MongoDB.
- • Role-based validation ensuring secure student-only enrollment.

4. Dark and Light Theme Implementation

A global dark and light theme toggle was implemented to enhance user experience and accessibility across the platform.

Implementation Highlights:

- • Theme toggle integrated in navigation bar.
- • Persistent theme state using local storage.
- • Consistent styling applied across all modules (Dashboard, Clubs, Results, Library).

5. Individual Contributions

Khushi Lohan

• Implemented backend logic for club notification triggers.

• Developed secure enrollment APIs with RBAC validation.

Prince Grewal

• Designed and implemented student dashboard UI enhancements.

• Developed club enrollment interface.

• Implemented global dark/light theme across all pages.

Gaurav Saini

• Structured MongoDB updates for club-member relationships.

• Integrated frontend with backend APIs for notifications and enrollment.

6. Outcome of Week 3

By the end of Week 3, club notification workflows were successfully implemented, direct student enrollment was enabled, and a complete application-wide theme system was deployed. These improvements enhanced interactivity and user experience within Academix.
